

## Document Management

### DXDocs<sup>SM</sup>

DebtX launched DXDocs<sup>SM</sup> in 2009 to serve clients who wanted to support their businesses with more than a basic virtual dataroom application. Our DXDocs clients require a platform that integrates secure document sharing with customer relationship management because they value the ability to institutionalize communications surrounding their business processes.

- ◆ **Easy Setup**

Create and manage secure document sites in minutes with the easiest and most efficient document upload functionality in the industry. No software installation or plug-ins required.

- ◆ **Drag-and-Drop Document Upload**

With a simple drag-and-drop action, users can upload multiple files and nested folders directly from a desktop or network drive. Customizable document security ensures only the right people can access specific folders and files.

- ◆ **Integrated Customer Relationship Management (CRM)**

Integrated CRM functionality to store all communications and notifications related to a project. The CRM function allows for the recording of telephone and email communications, scheduling and management of calendar events, and task management and tracking. The platform includes synchronization of emails and calendar events between the online DXDocs platform and each end-user's email and calendar application, such as Microsoft Outlook.

- ◆ **Digital Rights Management (DRM)**

DXDocs includes optional advanced DRM document security to track document usage by end user and to control watermarking, print, save, offline access, and document self-destruction restrictions.

- ◆ **Security**

DebtX utilizes the most advanced technology available for Internet Security. Hosted in a SSAE 16 Type II audited hosting facility, DXDocs includes multiple firewalls and intrusion detection systems and has dedicated security personnel assigned to DebtX. All data is encrypted at rest utilizing HTTPS and SFTP Protocols through 256 bit Secure Socket Layer (SSL) technology.

The DXDocs platform is used for a variety of purposes, including audit and compliance, risk oversight, CMBS and MBS securitization, regulatory compliance, M&A, basic deal management, and other traditional virtual data room applications.
